

Bale Handling Systems: Dollies, Conveyors, & Baggers

Bale Handling System with Dolly viewed from down-packing press. ↑

Bagging System

- This durable unit combines a Bagger and an Overhead Pusher to reduce costly labor
- Woven or film bags of natural and synthetic materials preserve fiber quality by wrapping the bale totally
- Emergency pull cords on either side of the Overhead Pusher stop it immediately

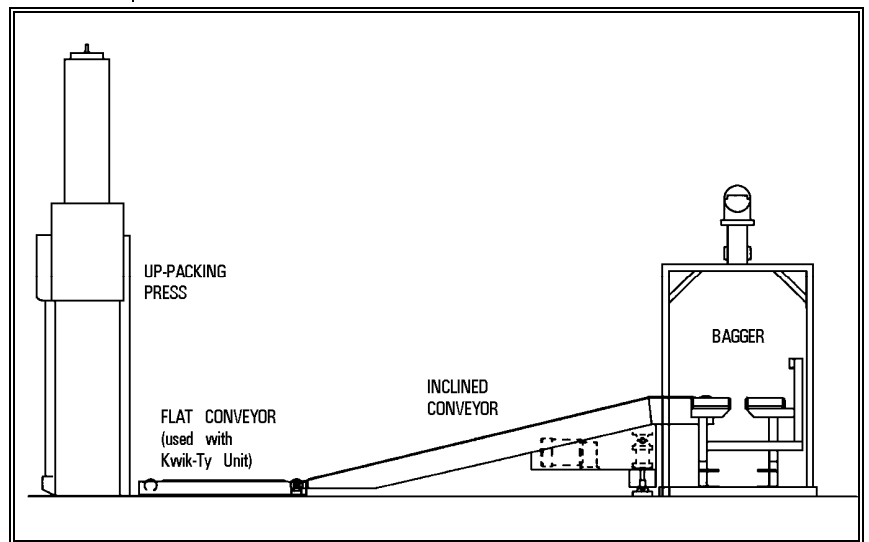

Inclined Chain Conveyor

- An Inclined Chain Conveyor receives bales from up-packing presses, which eject the bale very near the floor level.

Powered and Non-powered Conveyor

- Conveyor sections with either powered or non-powered rollers are available in straight or curved sections, level or inclined
- Turntables and transfer sections allow changes in direction in a small space

Bale Handling System with Chain Conveyor shown with up-packing press. ↓

Scales

- Optional Digital Scales with computer connections automate the weighing and recording process
- Optional automated labeling systems, including bar-coding capability, are also available
