

AG PRODUCERS CO-OP

NEW GINNING FACILITY

THE CLIENT

Ag Producers Co-op
Spearman, Texas (USA)

THE PROBLEM

The phenomenal cotton acreage increase in the northern Texas High Plains created a need for more ginning infrastructure to process the crop volume in a timely fashion, while maintain the highest quality of fiber possible.

THE SOLUTION

An all-new 4/234 gin plant, featuring split 144" wide precleaning, Super-Jet® and tandem Sentinel™ II lint cleaning, and Ultra High-Capacity HS/VST™ Premier™ III Dor-Les® press was constructed in 2019. It processed in excess of 100,000 bales during the 2019/20 ginning season, reaching hourly capacities at times of over 90 bales per hour and daily ginning totals of 1,500 bales per day.
